

CLOUD SECURITY ASSESSMENT

It is critical to ensure system and application security in the cloud, but even the most sophisticated cloud architects and developers make mistakes. Careful system and application design is the foundation of cloud security, but IT administrators must also regularly validate their security posture to ensure it meets requirements and can withstand frequent attacks.

With a Cloud Security Assessment, we will review your company's overall Cloud Architecture and Security & Compliance settings and standards to make certain they address the business, legal and regulatory requirements, along with IT security policies.

CLOUD ANALYSIS UNCOVERS POTENTIAL SECURITY GAPS

Our cloud experts have built a service offering to help ensure your organization's security is aligned with industry best practices and compliance requirements. Using special tools and techniques that go beyond the cloud native offerings, we can quickly reduce the timeline of identifying the security threats.

These findings are delivered as an itemized list of potential security threats that help your organization prioritize the issues and put a remediation plan into action.

SOLUTION OFFERING PROCESS

DISCOVERY:

Identify risks and optimization opportunities.

REVIEW:

Client review of assessment findings and high-level roadmap.

REMEDiation:

Resolve/Fix security threats and configure environment to optimize Cloud spend.

CLOUD SECURITY ASSESSMENT

DETAILED SECURITY ASSESSMENT:

- Identity and Access Management
- Network Perimeter Security
- Cloud Tenant Configuration
- Configuration Rules Enforcement
- Auditability (Logging and Traceability)
- Compliance Review (NIST, HIPAA, PCI)
